

CLEPA joins PULSE and Pre-LSDemo to support next-generation electric and connected mobility in Europe

CLEPA has joined two new EU-funded projects, 'PULSE' and 'Pre-LSDemo', strengthening its engagement in Europe's transition toward electrified, connected and automated mobility. Both initiatives address key technological and societal challenges, from seamless charging solutions to the large-scale deployment of Connected, Cooperative and Automated Mobility (CCAM).

PULSE focuses on advancing wireless bidirectional charging for electric vehicles, improving safety, accessibility and urban integration while enabling more flexible energy use for overnight charging and dynamic fleet operations. Pre-LSDemo will support large-scale CCAM demonstrations across Europe, with a strong emphasis on societal readiness, inclusivity and ethical design to help build a trusted, people-centric mobility ecosystem.
